1 Documentation conventions

1.1 Acronyms

MC Minecraft. 13

1.2 Glossary

ASCII American Standard Code for Information Interchange. Is a 8-bit code where each individual bit represents a unique character. *ASCII table* (n.d.). 16

async Asynchronous; returned non-sequentially. 16

IEEE 754 IEEE Standard for Floating-Point Arithmetic (IEEE 754) is a standard for computing floating-points operations. For more details about it check Rajaraman (2016). 17

Least significant bit The Least significant bit is the bit with the lowest index number. 7, 15, 17

Most significant bit The Most significant bit is the bit with the higher index number. 15, 33

Multidimensional array Array of arrays. 18

NOP No OPeration. It represents a valid operation that means 'do nothing'. 16

2 WatchWolf Introduction

WatchWolf is an integration testing environment for Minecraft plugins. It will validate that your plugin works using multiple real MC servers of different types and versions.

In order to achieve that, WatchWolf splits into 4 different programs, each one with one responsibility:

1. WatchWolf Tester

WatchWolf Tester is the entry point to the WatchWolf environment.¹ It will orchestrate all the setup/stop process and run the user tests.

2. WatchWolf Servers Manager

WatchWolf Servers Manager provides MC servers on-demand. It will start them and, after they have been closed, free the allocated resources.

3. WatchWolf Server

WatchWolf Server is the actual MC server. It will contain the plugin to test and run the commands sent by WatchWolf Tester.

4. WatchWolf Clients Manager

WatchWolf Clients Manager is the same as WatchWolf Servers Manager, but for clients. It will start clients on-demand and connect them to the servers allocated by WatchWolf.

5. WatchWolf Client

WatchWolf Client is a MC client, with the ability to connect to one server and interact with it.

You can see with more detail how the different programs relate on the Figure 2.1, Diagram representing WatchWolf's most important actuators.

¹The WatchWolf environment is the combination of all the WatchWolf parts: Tester, Servers Manager, Server, Clients Manager and Client.

Figure 2.1: Diagram representing WatchWolf's most important actuators

3 API Introduction

In order to interact with the different WatchWolf modules, you'll have to follow the WatchWolf API: a series of supported operations in one program. All the packets sent & received will follow the structure shown in Figure 3.1, Packet structure.

Figure 3.1: Packet structure

As a general rule, both MSB and LSB are preserved. This means that in a 2-bytes packet, the first part (0..7) will be the MSB, and the last (8..15) MSB.

3.1 Destiny

The first argument (*DST*) will be the destiny of that packet. This will specify one of the 4 modules connected to WatchWolf Tester (for more information refer to Section 2, WatchWolf Introduction). Note that WatchWolf Tester itself is not present, as it will be indicated with the Response bit at 1. You can see the different *DST* values for each module on the Figure 3.1, DST bits meaning.

DST[2]	DST[1]	DST[0]	Destination
0	0	0	ServerManagerPetition
0	0	1	ServerPetition
0	1	0	ClientsManagerPetition
0	1	1	ClientPetition
1	X	X	<i>Reserved</i>

Table 3.1: DST bits meaning

3.2 Response

Some of the petitions have return objects. Those petitions will return to the sender (Tester-Connector) with the same code, but with a '1' on the Response parameter. In that case, the parameter Destiny now means 'Origin'.

Some petitions have async "returns" (e.g. Error notification). Those will be sent directly marked as responses (Response bit at '1').

3.3 Operation

The Operation parameter specifies the desired request. Those change according to the Destiny, so they will be discussed in more detail in their respective sections.

The only exception is the all-zeroes operation (0b000000000000) which represents a NOP request. That way, if you need to perform a long test, you won't be kicked by inactivity² if you send this request every few minutes.

3.4 Arguments

The Arguments parameter specifies the arguments (if any) to the *Operation* request. Those change according to the Destiny, so the amount of arguments, and their types and order will be discussed in more detail in their respective sections.

Now there will be discussed the most common data types, so they will be independent of any programming language.

3.4.1 Character

Characters are sent as a 1-byte integer, representing its ASCII value.

3.4.2 Boolean

Booleans are 1-bit element that represents *true* (0b1), or *false* (0b0).

²This is a safety mechanism to avoid blocking a server to the same user forever. Besides being defined by the API it hasn't been implemented yet, and won't be until WatchWolf offers public servers.

For alignment reasons,³ booleans will be sent as 1-byte element. To avoid misunderstandings, let's define *false* as 0x00, and *true* as '*not false*'. That way, both figures 3.2 and 3.3 are valid *true* elements.

Figure 3.2: True packet with the LSB at 1

Figure 3.3: True packet with all bits at 1

3.4.3 Double

Doubles are 8-bytes floating-point numbers. They are represented following the IEEE 754⁴.

3.4.4 String

Strings are arrays of characters. Refer to the respective subsections for more information.

3.4.5 Array

Arrays are a set of n elements of the same type.

The structure is a 2-byte integer (representing the number of elements, n), followed by n elements of the same type. As a note here, by representing the size with a 2-byte integer the maximum number of elements per array is 65,535.

³In order to make the read/write more easy, we want to stick with (at least) 8 bits blocks.

⁴This standard should be used by C, Java and Python. [cite?](#)

Figure 3.4: Structure of a String

Arrays can be multidimensional, holding n arrays of the same type. It's worth mentioning that they don't have to be arrays of the same length, as can be seen in Figure 3.5, Example of a string array.

0	15	16	23	24	31
2 [number of arrays]			5 [str[0]'s length]		
h	e		l		l
o	6 [str[1]'s length]			w	
o	r		l		d
!	next type				

Figure 3.5: Example of a string array

3.4.6 File

Similar to the Array, a File is a name (String), followed by a group of bytes.

The problem here is that if we stick with the Array structure, the maximum size of a file will be around 8kB. To solve this, the File structure implements some kind of 'extended array', that extends the 'size' parameter to 32 bits. That way, the file size restriction by protocol definition⁵ is 4GB.

⁵Besides defining here what's allowed, remember that this packet will be inside a TCP payload **definition**. This means that the maximum file size will be probably redefined by the machine's TCP firewalls.

Figure 3.6: File structure

3.4.7 Server type

The Server type specifies the Minecraft server.

As a standard, we only support Spigot (*Spigot* (n.d.)) and Paper (*PaperMC* (n.d.)), but for scalability reasons this parameter is a String specifying the server type.

3.4.8 Position

...

⁶The path must be relative, and you can't go outside the Server directory (using '../'). Both " and './' means the root of the Server directory. **adding " compatibility**

Figure 3.7: Position structure

3.4.9 Block

... 56 bytes

Figure 3.8: Structure of a Block

Enum value	Block name	First Minecraft version
0	AIR	1.8

Enum value	Entity name	First Minecraft version
0	ZOMBIE	1.8

Table 3.5: Entity enum

4 Server manager petition

...

Figure 4.1: Server manager petition structure

Table of operations

You don't have to implement the NOP operation in this destiny block because the timeout happens inside the Server petition block. That is, if you don't call operations (or send NOPs) to the Server petition for a long time, the server will stop, and because the server stopped the Server manager will close the established connection.

4.1 Start server operation

...

Figure 4.2: Start server petition structure

Once a 'start server' request is received the program should create a server with the specified arguments, and return its IP:Port (for example, '127.0.0.1:25565', a 15-characters string; see Figure 4.3, Start server response structure). The IP to send the Server Petitions is the same, but the next port (IP:<port+1>).

If it's not possible to create it (for example: one argument is invalid, the user sent a plugin when it's specified that only Usual Plugins are allowed **explain**, or there's no free servers of that type), then an empty IP is returned (see Figure 4.4, Start server error response structure).

Figure 4.3: Start server response structure

Figure 4.4: Start server error response structure

4.1.1 Maps

Array of maps (worlds; Map[]). To have more information about arrays check the subsection 3.4.5, Array.

About the Map type, Minecraft is divided on different worlds (*World - Minecraft Wiki* (n.d.)). By default there's only three, but with some plugins this number can increase.

In order to properly test some plugins, there may be needed some kind of known place. To avoid overusing the Set block operation **link** you can send using this argument your(s) world(s).

Map in more detail

⁷Being the argument an array, the first 2 bytes specifies its size. As we must return an empty array, the argument should be exactly 16 zeroes.

4.1.2 Plugins

Array of plugins (Plugin[]). To have more information check the subsection 3.4.5, Array.

About the Plugin type, there's three types of plugins:

1. Usual plugins

The Usual plugins are plugins that you expect everyone to have for being extremely common, like WorldGuard (*WorldGuard* (n.d.)), or to allow the user to test plugins with Premium plugins⁸ dependencies. This allows both security and performance.

Something to highlight is the fact that, as mentioned in the operation Allows non usual plugins [reference](#), some ServerManager will only allow plugins that are already in the machine.

As can be seen in the Figure 4.5, Usual plugin structure, the first argument (that specifies the Plugin type) is 0x00.

The plugin version is optional, and can't be specified in the parameter *name*. If no version is provided (an empty string) then the Server Manager will pick the plugin with the highest version that is compatible with the desired server version.

Figure 4.5: Usual plugin structure

⁸Premium plugins are paid plugins. For that reason, only the purchaser can download them (so you can't send a link to the plugin), and sending them through the internet via file upload may not be legal, so the plugin must be already downloaded in the machine.

2. Uploaded plugins

The Uploaded plugins are plugins available in some website, thus can be sent through an URL.

structure?

3. File plugins

File plugins are plugins that are non-usual and aren't uploaded in any website, so they must be sent as a file.

As can be seen in the Figure 4.6, File plugin structure, the first argument (that specifies the Plugin type) is 0x02.

Figure 4.6: File plugin structure

mixed plugin types example?

4.1.3 Server version

String specifying the server type's version. For example, '1.12.2'.

4.1.4 Config files

...

4.2 Server started notification

After a Start server operation the server will start. Due to the unpredictable amount of time that the server takes to start up you'll receive a Server started notification once the server socket is available.

You may notice that there's another Server started notification under the Server petition section. That notification goes to the ServerManager ref?, while this goes to the Tester ref?. Also, the Server one have a token that is only shared between Server and the ServerManager, and the Tester doesn't have to know it too.

Figure 4.7: Server started notification structure

4.3 Error notification

...

Figure 4.8: Error notification structure

4.4 Get coverage operation

... get JaCoCo binary file

4.4.1 Get coverage request

...

Figure 4.9: Get coverage operation structure

4.4.2 Get coverage response

...

Figure 4.10: Get coverage response structure

5 Server petition

The server petitions are a bit different from the rest. The server petitions are designed in a way that everyone have some common operations, and then you can add some others optionally (and even non-standard ones). We'll define this 'set of operations' as groups.

For that reason, the operation field (defined on the Figure 3.1, Packet structure) becomes the group, and then the operation is defined on the next 2 bytes, as shown in the Figure 5.1, Server petition structure.

Figure 5.1: Server petition structure

5.1 Server petition group

The group tells which kind of petitions we're talking about.

The MSB tells if the group is one of the standards, thus must be followed by specification, or if it's non-standard, so the petition can be whatever the user want it to be. This is useful if you want to implement a petition not followed by the standard, or if the petition only makes sense in your personal environment.

The 0b00000000000001 group represents the 'base group'. This group implements some basic operations, and must be implemented. All the others are optional.

type[15]	type[14..4]	Extended type
0	0b000000000000	NOP ⁹
0	0b000000000001	Base operations
0	0b000000000010	System operations
0	0b000000000011	Performance operations
0	0b00000010000	WorldGuard operations
0	0b00000010001	Residence operations
1	XXXXXXXXXXXX	Reserved for internal use

Table 5.1: Extended types

If you’ve implemented an extended type and you believe that it makes sense to be part of the standard contact contact@watchwolf.dev to reserve one of the addresses.

5.2 Server petition operation

Like the parameter Operation, it specifies the desired request. For more information, refer to the subsection 3.3, Operation.

The only reserved operation is the all-zeroes operation (0x0000). It represents the question ‘is this extended petition implemented?’. The server must response (with the response bit at 1) with *true* (group implemented on this machine) or *false* (unknown/unimplemented group), as it can be seen in Figure 5.2, Implemented group response structure.

Figure 5.2: Implemented group response structure

5.3 Base operations

...

‘is implemented’ (all zeroes) optional

⁹As stated on the subsection 3.3, Operation, the all-zeroes operation represents a NOP request.

¹⁰except for groups 0b000000000000 and 0b000000000001

5.3.1 Server stop operation

...

Figure 5.3: Stop server operation structure

5.3.2 Server stopped notification

... response to...

To have more information about the *server id* parameter check the Subsection 5.3.3, Server started notification.

Figure 5.4: Server stopped response structure

5.3.3 Server started notification

This notification is sent to the Server Manager [ref?](#), as a response for the Start server operation, thus not really a response of a Server's operation.

As one IP can have multiple servers, a string that identifies the server must be sent with the response. This argument can be whatever you want (for example, <server ip>:<server port> will be unique), but must be shared between both the Server Manager and the Server. For security reasons [cite IP spoofing or similar](#) (because the Tester [ref?](#) also knows the server's IP and port) a hash function is encouraged to be used.

8 Revision history

Date	Revision	Changes
date	1	Initial public release, <i>v0.1.14</i> .

Table 8.1: Revision history

A Blocks

To generate the blocks enum Spigot 1.19 was used. That means that all the block names *should* be the exact same as *Spigot - Enum Material - 1.19* (n.d.).

A.1 Unused material modifiers

There's some Spigot modifiers that beside existing it won't be imported because there aren't a distinguished block in their own. You can find those in Figure A.1, Unused Spigot BlockData's modifiers.

Modifier name	Reason for discarding
has_bottle_X	Inventory dependent
has_record	Inventory dependent
enabled	Adjacent redstone dependent
triggered	Adjacent redstone dependent
instrument	Bottom-block dependent
occupied	Entity dependent
persistent	Admin block
unstable	Admin block
distance	Block dependent
stage	Same block
short	Tick dependent
attached	Block dependent
disarmed	Block dependent
power	Block/event dependent
tilt	Entity dependent
can_summon	Admin block
shrieking	Entity dependent
bloom	Admin block
bottom	Bottom-block dependent
has_book	Inventory dependent
sculk_sensor_phase	Admin block

Modifier name	Reason for discarding
signal_fire	Bottom-block dependent
north=tall	Top-block dependent
south=tall	Top-block dependent
east=tall	Top-block dependent
west=tall	Top-block dependent
hatch	Unable to concatenate
thickness	Block dependent
snowy	Block dependent
in_wall	Same block
moisture	Block dependent

Table A.1: Unused Spigot BlockData’s modifiers

In addition to this, some modifiers applied to certain blocks doesn’t change the block itself. Those are mentioned in Figure A.2, Unused Spigot BlockData’s modifiers on certain blocks.

Block name	Modifier name
CAVE_VINES	age
CACTUS	age
FIRE	age
KELP	age
SUGAR_CANE	age
MANGROVE_PROPAGULE	age

Table A.2: Unused Spigot BlockData's modifiers on certain blocks

A.2 Material modifiers

A.2.1 Age

Represents the different growth stages that a crop-like block can go through.

Defaults to 0.

Material	Age range
BEETROOTS	0-3
BAMBOO	0-1
CARROTS	0-7
CHORUS_FLOWER	0-5
COCOA	0-2
FROSTED_ICE	0-3
MELON_STEM	0-7
NETHER_WART	0-3
POTATOES	0-7
PUMPKIN_STEM	0-7
SWEET_BERRY_BUSH	0-3
WHEAT	0-7

Table A.3: Ageable materials

A.2.2 Attachment

Denotes how the bell is attached to its block.

Defaults to floor.

Material	Options
BELL	ceiling/double_wall/floor/single_wall

Table A.4: Attachable materials

A.2.3 Axis

Represents the axis along whilst this block is oriented.

Except for NETHER_PORTAL (which defaults to x), it defaults to y.

Material	Age range
NETHER_PORTAL	x/z
ACACIA_LOG	x/y/z
ACACIA_WOOD	x/y/z
BASALT	x/y/z
BIRCH_LOG	x/y/z
BIRCH_WOOD	x/y/z
BONE_BLOCK	x/y/z
CHAIN	x/y/z
CRIMSON_HYPHAE	x/y/z
CRIMSON_STEM	x/y/z
DARK_OAK_LOG	x/y/z
DARK_OAK_WOOD	x/y/z
DEEPSLATE	x/y/z
HAY_BLOCK	x/y/z
INFESTED_DEEPSLATE	x/y/z
JUNGLE_LOG	x/y/z
JUNGLE_WOOD	x/y/z
MANGROVE_LOG	x/y/z
MANGROVE_WOOD	x/y/z
MUDDY_MANGROVE_ROOTS	x/y/z
OAK_LOG	x/y/z
OAK_WOOD	x/y/z
OCHRE_FROGLIGHT	x/y/z
PEARLESCENT_FROGLIGHT	x/y/z
POLISHED_BASALT	x/y/z
PURPUR_PILLAR	x/y/z
QUARTZ_PILLAR	x/y/z
SPRUCE_LOG	x/y/z
SPRUCE_WOOD	x/y/z

Material	Age range
STRIPPED_ACACIA_LOG	x/y/z
STRIPPED_ACACIA_WOOD	x/y/z
STRIPPED_BIRCH_LOG	x/y/z
STRIPPED_BIRCH_WOOD	x/y/z
STRIPPED_CRIMSON_HYPHAE	x/y/z
STRIPPED_CRIMSON_STEM	x/y/z
STRIPPED_DARK_OAK_LOG	x/y/z
STRIPPED_DARK_OAK_WOOD	x/y/z
STRIPPED_JUNGLE_LOG	x/y/z
STRIPPED_JUNGLE_WOOD	x/y/z
STRIPPED_MANGROVE_LOG	x/y/z
STRIPPED_MANGROVE_WOOD	x/y/z
STRIPPED_OAK_LOG	x/y/z
STRIPPED_OAK_WOOD	x/y/z
STRIPPED_SPRUCE_LOG	x/y/z
STRIPPED_SPRUCE_WOOD	x/y/z
STRIPPED_WARPED_HYPHAE	x/y/z
STRIPPED_WARPED_STEM	x/y/z
VERDANT_FROGLIGHT	x/y/z
WARPED_HYPHAE	x/y/z
WARPED_STEM	x/y/z

Table A.5: Orientable materials

A.2.4 Berries

Indicates whether the block has berries.

Defaults to false.

Material	Values
CAVE_VINES	true/false
CAVE_VINES_PLANT	true/false

Table A.6: Materials with berries

A.2.5 Bites

Represents the amount of bites which have been taken from this slice of cake.

Defaults to 0.

Material	Values
CAKE	0-6

Table A.7: Cake

A.2.6 Candles

Represents the number of candles which are present.

Defaults to 1.

Material	Values
BLACK_CANDLE	1-4
BLUE_CANDLE	1-4
BROWN_CANDLE	1-4
CANDLE	1-4
CYAN_CANDLE	1-4
GRAY_CANDLE	1-4
GREEN_CANDLE	1-4
LIGHT_BLUE_CANDLE	1-4
LIGHT_GRAY_CANDLE	1-4
LIME_CANDLE	1-4
MAGENTA_CANDLE	1-4
ORANGE_CANDLE	1-4
PINK_CANDLE	1-4

Material	Values
PURPLE_CANDLE	1-4
RED_CANDLE	1-4
WHITE_CANDLE	1-4
YELLOW_CANDLE	1-4

Table A.8: Materials with candles

A.2.7 Charges

Represents the amount of times the anchor may still be used.

Defaults to 0.

Material	Values
RESPAWN_ANCHOR	0-4

Table A.9: Charged materials

A.2.8 Conditional

Denotes whether this command block is conditional or not.

Defaults to false.

Material	Values
CHAIN_COMMAND_BLOCK	true/false
COMMAND_BLOCK	true/false
REPEATING_COMMAND_BLOCK	true/false

Table A.10: Conditionable materials

A.2.9 Delay

Propagation delay of a repeater.

Defaults to 1.

Material	Values
REPEATER	1-4

Table A.11: Delayable materials

A.2.10 Down

Set which faces of the block textures are displayed on.

Except for BROWN_MUSHROOM_BLOCK, MUSHROOM_STEM and RED_MUSHROOM_BLOCK (which defaults to true), it defaults to false.

Material	Values
CHORUS_PLANT	true/false
GLOW_LICHEN	true/false
SCULK_VEIN	true/false
BROWN_MUSHROOM_BLOCK	true/false
MUSHROOM_STEM	true/false
RED_MUSHROOM_BLOCK	true/false

Table A.12: Materials with down option

A.2.11 North, South, East and West

Set which faces of the block textures are displayed on.

As the *tall* option is unused (check Table A.1, Unused Spigot BlockData's modifiers), *none* and *low* will be considered as *false* and *true*, respectively.

Material	Options (default on bold)
ACACIA_FENCE	true/ false
BIRCH_FENCE	true/ false
BLACK_STAINED_GLASS_PANE	true/ false
BLUE_STAINED_GLASS_PANE	true/ false
BROWN_STAINED_GLASS_PANE	true/ false
CHORUS_PLANT	true/ false
CRIMSON_FENCE	true/ false

Material	Options (default on bold)
CYAN_STAINED_GLASS_PANE	true/ false
DARK_OAK_FENCE	true/ false
FIRE	true/ false
GLASS_PANE	true/ false
GLOW_LICHEN	true/ false
GRAY_STAINED_GLASS_PANE	true/ false
GREEN_STAINED_GLASS_PANE	true/ false
IRON_BARS	true/ false
JUNGLE_FENCE	true/ false
LIGHT_BLUE_STAINED_GLASS_PANE	true/ false
LIGHT_GRAY_STAINED_GLASS_PANE	true/ false
LIME_STAINED_GLASS_PANE	true/ false
MAGENTA_STAINED_GLASS_PANE	true/ false
MANGROVE_FENCE	true/ false
NETHER_BRICK_FENCE	true/ false
OAK_FENCE	true/ false
ORANGE_STAINED_GLASS_PANE	true/ false
PINK_STAINED_GLASS_PANE	true/ false
PURPLE_STAINED_GLASS_PANE	true/ false
RED_STAINED_GLASS_PANE	true/ false
SCULK_VEIN	true/ false
SPRUCE_FENCE	true/ false
TRIPWIRE	true/ false
VINE	true/ false
WARPED_FENCE	true/ false
WHITE_STAINED_GLASS_PANE	true/ false
YELLOW_STAINED_GLASS_PANE	true/ false
BROWN_MUSHROOM_BLOCK	true /false
MUSHROOM_STEM	true /false
RED_MUSHROOM_BLOCK	true /false

Material	Options (default on bold)
REDSTONE_WIRE	none /up/slide
ANDESITE_WALL	none /low/tall
BLACKSTONE_WALL	none /low/tall
BRICK_WALL	none /low/tall
COBBLED_DEEPSLATE_WALL	none /low/tall
COBBLESTONE_WALL	none /low/tall
DEEPSLATE_BRICK_WALL	none /low/tall
DEEPSLATE_TILE_WALL	none /low/tall
DIORITE_WALL	none /low/tall
END_STONE_BRICK_WALL	none /low/tall
GRANITE_WALL	none /low/tall
MOSSY_COBBLESTONE_WALL	none /low/tall
MOSSY_STONE_BRICK_WALL	none /low/tall
MUD_BRICK_WALL	none /low/tall
NETHER_BRICK_WALL	none /low/tall
POLISHED_BLACKSTONE_BRICK_WALL	none /low/tall
POLISHED_BLACKSTONE_WALL	none /low/tall
POLISHED_DEEPSLATE_WALL	none /low/tall
PRISMARINE_WALL	none /low/tall
RED_NETHER_BRICK_WALL	none /low/tall
RED_SANDSTONE_WALL	none /low/tall
SANDSTONE_WALL	none /low/tall
STONE_BRICK_WALL	none /low/tall

Table A.13: Orientable materials

A.2.12 Up

Set which faces of the block textures are displayed on.

Except for CHORUS_PLANT, FIRE, GLOW_LICHEN, SCULK_VEIN and VINE (which defaults to false), it defaults to true.

Material	Options
CHORUS_PLANT	true/false
FIRE	true/false
GLOW_LICHEN	true/false
SCULK_VEIN	true/false
VINE	true/false
BROWN_MUSHROOM_BLOCK	true/false
MUSHROOM_STEM	true/false
RED_MUSHROOM_BLOCK	true/false

Table A.14: Materials with up option

A.2.13 Eggs

Number of eggs which appear in the block.

Defaults to 1.

Material	Values
TURTLE_EGG	1-4

Table A.15: Materials with eggs

A.2.14 Extended

Denotes whether the piston head is currently extended or not.

Defaults to false.

Material	Values
PISTON	true/false
STICKY_PISTON	true/false

Table A.16: Extendable materials

A.2.15 Eye

Defaults to false.

Material	Values
END_PORTAL_FRAME	true/false

Table A.17: Materials with eye

A.2.16 Face

Represents the face to which a lever or button is stuck.

WALL_SIGN

Defaults to wall.

Material	Directions
ACACIA_BUTTON	wall/floor/ceiling
BIRCH_BUTTON	wall/floor/ceiling
CRIMSON_BUTTON	wall/floor/ceiling
DARK_OAK_BUTTON	wall/floor/ceiling
GRINDSTONE	wall/floor/ceiling
JUNGLE_BUTTON	wall/floor/ceiling
LEVER	wall/floor/ceiling
MANGROVE_BUTTON	wall/floor/ceiling
OAK_BUTTON	wall/floor/ceiling
POLISHED_BLACKSTONE_BUTTON	wall/floor/ceiling
SPRUCE_BUTTON	wall/floor/ceiling
STONE_BUTTON	wall/floor/ceiling
WARPED_BUTTON	wall/floor/ceiling

Table A.18: Directional materials

A.2.17 Facing

Represents the face towards which the block is pointing.

Material	Options (default on bold)
HOPPER	down /north/south/east/west

Material	Options (default on bold)
OBSERVER	up/down/north/ south /east/west
BARREL	up/down/ north /south/east/west

Table A.20: Two-blocks materials

A.2.19 Hanging

Denotes whether the block is hanging.

Defaults to false.

Material	Values
LANTERN	true/false
MANGROVE_PROPAGULE	true/false
SOUL_LANTERN	true/false

Table A.21: Hangable materials

A.2.20 Hinge

Indicates which hinge this door is attached to and will rotate around when opened.

Defaults to left.

Material	Options
ACACIA_DOOR	left/right
BIRCH_DOOR	left/right
CRIMSON_DOOR	left/right
DARK_OAK_DOOR	left/right
IRON_DOOR	left/right
JUNGLE_DOOR	left/right
MANGROVE_DOOR	left/right
OAK_DOOR	left/right
SPRUCE_DOOR	left/right
WARPED_DOOR	left/right

Table A.22: Doors

A.2.21 Honey level

Represents the amount of honey stored in the hive.

Defaults to 0.

Material	Values
BEEHIVE	0/5 ¹²
BEE_NEST	0/5 ¹²

Table A.23: Hives

A.2.22 Inverted

Denotes whether this daylight detector is in the inverted mode.

¹²The block is the same from honey-level 0 to 4, and it changes in age 5. That's why age=5 is considered as age=1, and age=0-4 as age=0, as you may notice in Figure ??, Modifier concatenation.

Defaults to false.

Material	Values
DAYLIGHT_DETECTOR	true/false

Table A.24: Invertible blocks

A.2.23 Layers

Represents the amount of layers of snow which are present in this block.

Defaults to 1.

Material	Values
SNOW	1-8

Table A.25: Snow

A.2.24 Leaves

Represents the size of the leaves of the bamboo block.

Defaults to none.

Material	Values
BAMBOO	none/small/large

Table A.26: Bamboo

A.2.25 Level

Represents the amount of fluid contained within this block, either by itself or inside a cauldron.

Defaults on 0 except for POWDER_SNOW_CAULDRON and WATER_CAULDRON (which defaults on 1).

Material	Values
COMPOSTER	0-8
LAVA	0-7
WATER	0-7
POWDER_SNOW_CAULDRON	1-3
WATER_CAULDRON	1-3

Table A.27: Levelled materials

A.2.26 Lit

Denotes whether this block is currently lit.

Except for CAMPFIRE, REDSTONE_TORCH, REDSTONE_WALL_TORCH and SOUL_CAMPFIRE (which defaults to true), it defaults to false.

Material	Options
BLACK_CANDLE	true/false
BLACK_CANDLE_CAKE	true/false
BLAST_FURNACE	true/false
BLUE_CANDLE	true/false
BLUE_CANDLE_CAKE	true/false
BROWN_CANDLE	true/false
BROWN_CANDLE_CAKE	true/false
CANDLE	true/false
CANDLE_CAKE	true/false
CYAN_CANDLE	true/false
CYAN_CANDLE_CAKE	true/false

CAMPFIRE	true/false
REDSTONE_TORCH	true/false
REDSTONE_WALL_TORCH	true/false
SOUL_CAMPFIRE	true/false

Table A.28: Lightable materials

A.2.27 Locked

Denotes whether the repeater is in the locked state or not.

Defaults to false.

Material	Values
REPEATER	true/false

Table A.29: Repeater

A.2.28 Mode

Indicates what mode the block will operate in.

Material	Options (default on bold)
COMPARATOR	compare /subtract
STRUCTURE_BLOCK	load /corner/save

Table A.30: Materials with mode

A.2.29 Note

Specified tuned pitch that the instrument will be played in.

Defaults to 0.

Material	Values
NOTE_BLOCK	0-24

Table A.31: Note block

A.2.30 Open

Denotes whether this block is currently opened.

Defaults to false.

Material	Values
ACACIA_DOOR	true/false
ACACIA_FENCE_GATE	true/false

Material	Values
ACACIA_TRAPDOOR	true/false
BARREL	true/false
BIRCH_DOOR	true/false
BIRCH_FENCE_GATE	true/false

WARPED_FENCE_GATE	true/false
WARPED_TRAPDOOR	true/false

Table A.32: Openable materials

A.2.31 Orientation

Direction the block is facing.

Defaults to north_up, and can take any of the values shown in Table A.33, Jigsaw orientations.

Orientation
north_up
south_up
east_up
west_up
up_north
up_south
up_east
up_west
down_north
down_south
down_east
down_west

Table A.33: Jigsaw orientations

Material
JIGSAW

Table A.34: Jigsaw

A.2.32 Part

Denotes which half of the bed this block corresponds to.

Defaults to foot.

Material	Values
BLACK_BED	foot/head

Material	Values
BLUE_BED	foot/head
BROWN_BED	foot/head
CYAN_BED	foot/head
GRAY_BED	foot/head
GREEN_BED	foot/head
LIGHT_BLUE_BED	foot/head
LIGHT_GRAY_BED	foot/head
LIME_BED	foot/head
MAGENTA_BED	foot/head
ORANGE_BED	foot/head
PINK_BED	foot/head
PURPLE_BED	foot/head
RED_BED	foot/head
WHITE_BED	foot/head
YELLOW_BED	foot/head

Table A.35: Openable materials

A.2.33 Pickles

Indicates the number of pickles in this block.

Defaults to 1.

Material	Values
SEA_PICKLE	1-4

Table A.36: Materials with pickles

A.2.34 Powered

Indicates whether this block is in the powered state or not (emitting current).

Defaults to false.

Material	Powered value
ACACIA_BUTTON	true/false
ACACIA_PRESSURE_PLATE	true/false
BIRCH_BUTTON	true/false
BIRCH_PRESSURE_PLATE	true/false
COMPARATOR	true/false
CRIMSON_BUTTON	true/false

TRIPWIRE_HOOK	true/false
WARPED_BUTTON	true/false
WARPED_PRESSURE_PLATE	true/false

Material	Powered value
----------	---------------

Table A.37: Powerabled materials

A.2.35 Rotation

Denotes where the block is looking.

Defaults to 0 and goes up to 15.

Rotation value	Direction
0	South
4	West
8	North
12	East

Table A.38: Relation between rotation and where is looking

Table A.45: Waterlogged materials

A.3 Material modifiers aggregation

some modifiers are similar, so let's add them together

A.3.1 Direction aggregation

modifier, followed by the condition to set the bit to 1

Property	U	D	N	S	E	W
up	true					
down		true				
north			true			
south				true		
east					true	
west						true
face	ceiling	floor				
attachment	ceiling	floor				
half	top or upper	bottom or lower				
facing	up	down	north	south	east	west
vertical-direction	up	down				
type	top or double	bottom or double				

¹⁴If it's an underwater block (defaults to true).

Property	U	D	N	S	E	W
orientation	up_ <i>X</i>	down_ <i>X</i>	<i>X</i> _north or north_up	<i>X</i> _south or south_up	<i>X</i> _east or east_up	<i>X</i> _west or west_up
shape	ascending_ <i>X</i>		ascending_north or north_ <i>X</i>	ascending_south or south_ <i>X</i> or north_south	ascending_east or <i>X</i> _east or east_west	ascending_west or <i>X</i> _west
hanging	true					

Table A.46: Direction aggregation

A.3.2 Axis aggregation

modifier up to 2b

Property	MSB	LSB
axis	Y or Z	X or Z
attachment	double_wall	single_wall

Table A.47: Axis aggregation

A.3.3 Age aggregation

modifier up to 8b

Property
age
berries
honey_level

Table A.48: Age aggregation

A.3.4 Grouped materials aggregation

modifier up to 3b

Property
candles
eggs
pickles

Table A.49: Grouped materials aggregation

A.3.5 Stages aggregation

modifier up to 8b

Property
charges
level
bites
layers

Table A.50: Stages aggregation

A.3.6 Parts aggregation

modifier; up to 4b

Property
part
piston_head
stair_shape

Table A.51: Parts aggregation
