Figure 2.1: Packet structure

## 2.1 Destiny

#### explain

#### reference to the interconnected blocks

| DST[2] | DST[1] | DST[0] | Destination             |
|--------|--------|--------|-------------------------|
| 0      | 0      | 0      | ServerManagerPetition   |
| 0      | 0      | 1      | ServerPetition          |
| 0      | 1      | 0      | ClientConnectorPetition |
| 0      | 1      | 1      | ClientPetition          |
| 1      | X      | X      | Reserved                |

Table 2.1: DST bits meaning

### 2.2 Response

Some of the petitions have return objects. Those petitions will return to the sender (Tester-Connector) with the same code, but with a '1' on the Response parameter. In that case, the parameter Destiny now means 'Origin'.

Some petitions have async "returns" (for example: examples). Those will be sent using petitions without return's operations (so, petitions without a mirror petition with a '1' as Response), marked as responses (Response bit at '1').

### 2.3 Operation

The Operation parameter specifies the desired request. Those change according to the Destiny, so they will be discussed in more detail in their respective sections.

The only exception is the all-zeroes operation (0b00000000000) which represents a NOP request. That way, if you need to perform a long test, you won't be explain the 'kicked by mactivity' concept kicked by inactivity if you send this request every few minutes.

### 2.4 Arguments

The Arguments parameter specifies the arguments (if any) to the *Operation* request. Those change according to the Destiny, so the amount of arguments, and their types and order will be discussed in more detail in their respective sections.

Now there will be discussed the most common data types, so they will be independent of any programming language.

#### 2.4.1 Character

Characters are sent as a 1-byte integer, representing its ASCII ref? value.

### 2.4.2 Integer

Integers are signed 4-bytes integers.

#### 2.4.3 Boolean

Booleans are 1-bit element that represents true (0b1), or false (0b0).

For alignment define? reasons, booleans will be sent as 1-byte element. To avoid misunderstandings, let's define false as 0x00, and true as 'not define? false'. That way, this two packets are valid true elements:

Figure 2.2: True packet with the LSB at 1

Figure 2.3: True packet with all bits at 1

#### 2.4.4 Float

Floats are 4-bytes floating-point numbers. They are represented following the IEEE 754<sup>1</sup>.

## 2.4.5 String

Strings are arrays of characters. Refer to the respective subsections for more information.

### 2.4.6 Array

Arrays are a set of n elements of the same type.

The structure is a 2-byte first (0..7) MSB, then (8..15) LSB integer (representing the number of elements, n), followed by n elements of the same type. As a note here, by representing the size with a 2-byte integer the maximum number of elements per array is 65,535.

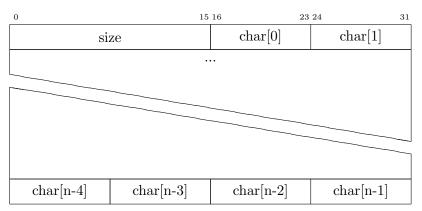

Figure 2.4: Structure of a String

Arrays can be multidimensional, holding n arrays of the same type. It's worth mentioning that they don't have to be arrays of the same length, as can be seen in Figure 2.5, Example of a string array.

<sup>&</sup>lt;sup>1</sup>This standard should be used by C, Java and Python. cite?

| 0         | 15         | 16 23      | 24 31     |
|-----------|------------|------------|-----------|
| 2 [number | of arrays] | 5 [str[0]' | s length] |
| h         | e          | 1          | 1         |
| О         | 6 [str[1], | s length]  | W         |
| О         | r          | 1          | d         |
| !         |            | next type  |           |

Figure 2.5: Example of a string array

## 2.4.7 File

Similar to the Array, a File is a name (String), followed by a group of bytes.

The problem here is that if we stick with the Array structure, the maximum size of a file will be around 8kB. To solve this, the File structure implements some kind of 'extended array', that extends the 'size' parameter to 32 bits. That way, the file size restriction by protocol definition<sup>2</sup> is 4GB.

<sup>&</sup>lt;sup>2</sup>Besides defining here what's allowed, remember that this packet will be inside a TCP payload definition? This means that the maximum file size will be probably redefined by the machine's TCP firewalls.

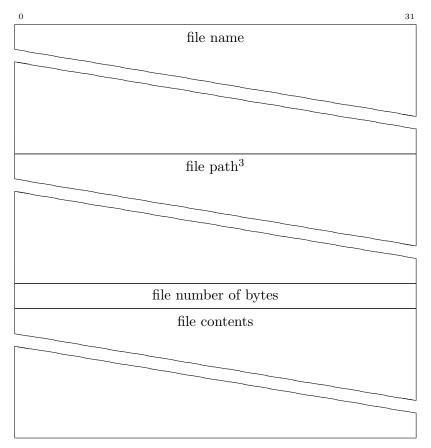

Figure 2.6: File structure

# 2.4.8 Server type

The Server type specifies the Minecraft server.

As a standard, we only support Spigot (Spigot (n.d.)) and Paper (PaperMC (n.d.)), but for scalability reasons this parameter is a String specifying the server type.

### 2.4.9 Block

0 29 30 31 enum value 00

Figure 2.7: Structure of a Block

 $<sup>^{3}</sup>$ The path must be relative, and you can't go outside the Server directory (using '../'). Both " and './' means the root of the Server directory.

### unsigned 4-bytes integer. 2MSB forced at 00 (01, 10 and 11 reserved for Complex/Basic

# Blocks (if made)), others as Enum value

| Enum value | Block name | First Minecraft version |
|------------|------------|-------------------------|
| 0          | AIR        | 1.8                     |

Table 2.2: Block enum

# 2.4.10 Item

# 3 Server manager petition

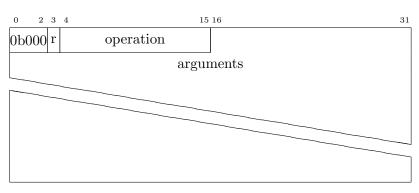

Figure 3.1: Server manager petition structure

#### Table of operations

You don't have to implement the NOP operation in this destiny block because the timeout happens inside the Server petition block. That is, if you don't call operations (or send NOPs) to the Server petition for a long time, the server will stop, and because the server stopped the Server manager will close the established connection.

## 3.1 Start server operation

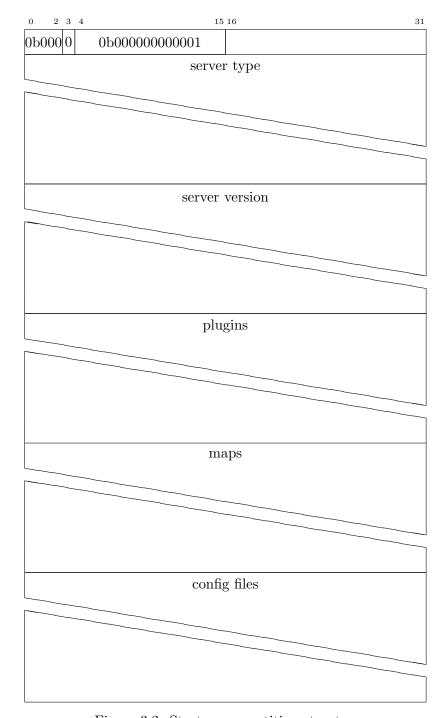

Figure 3.2: Start server petition structure

Once a 'start server' request is received the program should create a server with the specified arguments, and return its IP:Port (for example, '127.0.0.1:25565', a 15-characters string; see Figure 3.3, Start server response structure). The IP to send the Server Petitions is the same, but the next port (IP:<port+1>).

If it's not possible to create it (for example: one argument is invalid, the user sent a plugin when it's specified that only Usual Plugins are allowed explain, or there's no free servers of that type), then an empty IP is returned (see Figure 3.4, Start server error response structure).

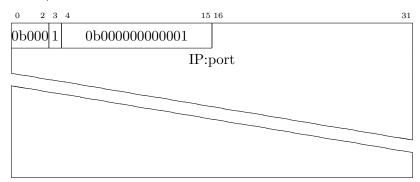

Figure 3.3: Start server response structure

Figure 3.4: Start server error response structure

### 3.1.1 Maps

Array of maps (worlds; Map[]). To have more information about arrays check the subsection 2.4.6, Array.

About the Map type, Minecraft is divided on different worlds (World - Minecraft Wiki (n.d.)). By default there's only three, but with some plugins this number can increase.

In order to properly test some plugins, there may be needed some kind of known place. To avoid overusing the Set block operation link you can send using this argument your(s) world(s).

#### Map in more detail

<sup>&</sup>lt;sup>4</sup>Being the argument an array, the first 2 bytes specifies its size. As we must return an empty array, the argument should be exactly 16 zeroes.

### 3.1.2 Plugins

Array of plugins (Plugin[]). To have more information check the subsection 2.4.6, Array.

About the Plugin type, there's three types of plugins:

#### 1. Usual plugins

The Usual plugins are plugins that you expect everyone to have for being extremely common, like WorldGuard (WorldGuard (n.d.)), or to allow the user to test plugins with Premium plugins<sup>5</sup> dependencies. This allows both security and performance.

Something to highlight is the fact that, as mentioned in the operation Allows non usual plugins reference, some ServerManager will only allow plugins that are already in the machine.

As can be seen in the Figure 3.5, Usual plugin structure, the first argument (that specifies the Plugin type) is 0x00.

The plugin version is optional, and can't be specified in the parameter *name*. If no version is provided (an empty string) then the Server Manager will pick the plugin with the highest version that is compatible with the desired server version.

Figure 3.5: Usual plugin structure

<sup>&</sup>lt;sup>5</sup>Premium plugins are paid plugins. For that reason, only the purchaser can download them (so you can't send a link to the plugin), and sending them through the internet via file upload may not be legal, so the plugin must be already downloaded in the machine.

#### 2. Uploaded plugins

The Uploaded plugins are plugins available in some website, thus can be sent through an URL.

#### structure?

#### 3. File plugins

File plugins are plugins that are non-usual and aren't uploaded in any website, so they must be sent as a file.

As can be seen in the Figure 3.6, File plugin structure, the first argument (that specifies the Plugin type) is 0x02.

Figure 3.6: File plugin structure

#### mixed plugin types example?

#### 3.1.3 Server version

String specifying the server type's version. For example, '1.12.2'.

# 3.1.4 Config files

#### 3.2 Server started notification

After a Start server operation the server will start. Due to the unpredictable amount of time that the server takes to start up you'll receive a Server started notification once the server socket is available. You may notice that there's another Server started notification under the Server petition section. That notification goes to the ServerManager ref?, while this goes to the Tester ref?. Also, the Server one have a token that is only shared between Server and the ServerManager, and the Tester doesn't have to know it too.

Figure 3.7: Server started notification structure

## 3.3 Error notification

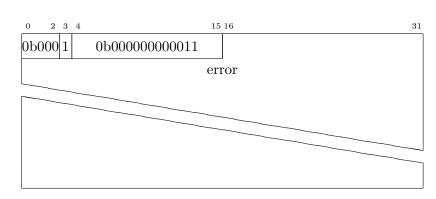

Figure 3.8: Error notification structure

# 4 Server petition

• • •

The server petitions are a bit different from the rest. The server petitions are designed in a way that everyone have some common operations, and then you can add some others optionally (and even non-standard ones). We'll define this 'set of operations' as groups.

For that reason, the operation field (defined on the Figure 2.1, Packet structure) becomes the group, and then the operation is defined on the next 2 bytes, as shown in the Figure 4.1, Server petition structure.

Figure 4.1: Server petition structure

### 4.1 Server petition group

The group tells which kind of petitions we're talking about.

The MSB abbreviation? tells if the group is one of the standards, thus must be followed by specification, or if it's non-standard, so the petition can be whatever the user want it to be. This is useful if you want to implement a petition not followed by the standard, or if the petition only makes sense in your personal environment.

The 0b00000000001 group represents the 'base group'. This group implements some basic operations, and must be implemented. All the others are optional.

| type[15] | type[144]     | Extended type             |
|----------|---------------|---------------------------|
| 0        | 0b0000000000  | $NOP^6$                   |
| 0        | 0b00000000001 | Base operations           |
| 0        | 0b00000000010 | Performance operations    |
| 0        | 0b00000000011 | WorldGuard operations     |
| 0        | 0b0000000100  | Residence operations      |
| 1        | XXXXXXXXXX    | Reserved for internal use |

Table 4.1: Extended types

If you've implemented an extended type and you believe that it makes sense to be part of the standard contact contact@watchwolf.dev to reserve one of the addresses.

### 4.2 Server petition operation

Like the parameter Operation, it specifies the desired request. For more information, refer to the subsection 2.3, Operation.

The only reserved operation is the all-zeroes operation (0x0000). It represents the question 'is this extended petition implemented?'. The server must response (with the response bit at 1) with true (group implemented on this machine) or false (unknown/unimplemented group), as it can be seen in Figure 4.2, Implemented group response structure.

Figure 4.2: Implemented group response structure

### 4.3 Base operations

...

#### is implemented' (all zeroes) optional

<sup>&</sup>lt;sup>6</sup>As stated on the subsection 2.3, Operation, the all-zeroes operation represents a NOP request.

 $<sup>^{7}</sup>$ except for groups 0b000000000000 and 0b000000000001

### 4.3.1 Server stop operation

Figure 4.3: Stop server operation structure

### 4.3.2 Server stopped notification

#### ... response to...

To have more information about the *server id* parameter check the Subsection 4.3.3, Server started notification.

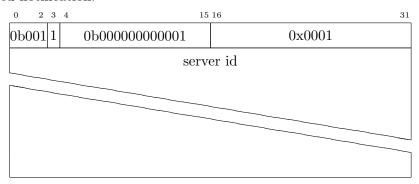

Figure 4.4: Server stopped response structure

#### 4.3.3 Server started notification

This notification is sent to the Server Manager ref?, as a response for the Start server operation, thus not really a response of a Server's operation.

As one IP can have multiple servers, a string that identifies the server must be sent with the response. This argument can be whatever you want (for example, <server ip>:<server port> will be unique), but must be shared between both the Server Manager and the Server. For security reasons cite IP spoofing or similar (because the Tester ref? also knows the server's IP and port) a hash function is encouraged to be used.

| Date | Revision | Changes          |  |
|------|----------|------------------|--|
| date | 1        | Initial release. |  |

Table 6.1: Revision history

### **A Blocks**

To generate the blocks enum Spigot 1.19 was used. That means that all the block names should be the exact same as ?.

#### A.1 Material modifiers

There's one downside on using Spigot's Material: it doesn't describes perfectly the block. In some aspects it will, for example, distinguish between wood types, but it won't differentiate between a wooden stair and a wooden stair with water.

That's why there's some prefixes and suffixes (that will be discussed in the following subsections) surrounding the original Spigot name, to make every possible Minecraft block combination appear in the block enum. Just to clarify, all the block modifiers has also been extracted from Spigot (all ?'s subinterfaces).

### A.1.1 Unused modifiers

There's some Spigot modifiers that beside existing it won't be imported because there aren't a distinguished block in their own. You can find those in Figure A.1, Unused Spigot BlockData's modifiers.

| Modifier name | Reason for discarding       |
|---------------|-----------------------------|
| has_bottle_X  | Inventory dependent         |
| has_record    | Inventory dependent         |
| enabled       | Adjacent redstone dependent |
| triggered     | Adjacent redstone dependent |
| instrument    | Bottom-block dependent      |
| occupied      | Entity dependent            |
| persistent    | Admin block                 |
| unstable      | Admin block                 |
| distance      | Block dependent             |
| stage         | Same block                  |
| short         | Tick dependent              |

| Modifier name      | Reason for discarding  |
|--------------------|------------------------|
| attached           | Block dependent        |
| disarmed           | Block dependent        |
| power              | Block/event dependent  |
| tilt               | Entity dependent       |
| can_summon         | Admin block            |
| shrieking          | Entity dependent       |
| bloom              | Admin block            |
| bottom             | Bottom-block dependent |
| has_book           | Inventory dependent    |
| sculk_sensor_phase | Admin block            |
| signal_fire        | Bottom-block dependent |
| north=tall         | Top-block dependent    |
| south=tall         | Top-block dependent    |
| east=tall          | Top-block dependent    |
| west=tall          | Top-block dependent    |

Table A.1: Unused Spigot BlockData's modifiers

In addition to this, some modifiers applied to certain blocks doesn't change the block itself. Those are mentioned in Figure A.2, Unused Spigot BlockData's modifiers on certain blocks.

| Block name         | Modifier name |
|--------------------|---------------|
| CAVE_VINES         | age           |
| CACTUS             | age           |
| FIRE               | age           |
| KELP               | age           |
| SUGAR_CANE         | age           |
| MANGROVE_PROPAGULE | age           |
| TWISTING_VINES     | age           |
| WEEPING_VINES      | age           |

| Block name                        | Modifier name |
|-----------------------------------|---------------|
| ANDESITE_WALL                     | up            |
| BLACKSTONE_WALL                   | up            |
| $\mathrm{BRICK}_{-}\mathrm{WALL}$ | up            |
| COBBLED_DEEPSLATE_WALL            | up            |
| $COBBLESTONE\_WALL$               | up            |
| DEEPSLATE_BRICK_WALL              | up            |
| DEEPSLATE_TILE_WALL               | up            |
| DIORITE_WALL                      | up            |
| END_STONE_BRICK_WALL              | up            |
| GRANITE_WALL                      | up            |
| $MOSSY\_COBBLESTONE\_WALL$        | up            |
| MOSSY_STONE_BRICK_WALL            | up            |
| MUD_BRICK_WALL                    | up            |
| NETHER_BRICK_WALL                 | up            |
| POLISHED_BLACKSTONE_BRICK_WALL    | up            |
| POLISHED_BLACKSTONE_WALL          | up            |
| POLISHED_DEEPSLATE_WALL           | up            |
| PRISMARINE_WALL                   | up            |
| RED_NETHER_BRICK_WALL             | up            |
| ${ m RED\_SANDSTONE\_WALL}$       | up            |
| $SANDSTONE\_WALL$                 | up            |
| STONE_BRICK_WALL                  | up            |
| ACACIA_DOOR                       | powered       |

| WARPED_TRAPDOOR     | powered       |

 $\label{eq:continuous} \parbox{Table A.2: Unused Spigot BlockData's modifiers on certain blocks}$ 

# A.1.2 Age

Represents the different growth stages that a crop-like block can go through.

Defaults to 0.

| Material         | Age range |
|------------------|-----------|
| BEETROOTS        | 0-3       |
| BAMBOO           | 0-1       |
| CARROTS          | 0-7       |
| CHORUS_FLOWER    | $0/5^{8}$ |
| COCOA            | 0-2       |
| FROSTED_ICE      | 0-3       |
| MELON_STEM       | 0-7       |
| NETHER_WART      | 0-3       |
| POTATOES         | 0-7       |
| PUMPKIN_STEM     | 0-7       |
| SWEET_BERRY_BUSH | 0-3       |
| WHEAT            | 0-7       |

Table A.3: Ageable materials

### A.1.3 Attachment

Denotes how the bell is attached to its block.

Defaults to floor.

| Material | Options                               |
|----------|---------------------------------------|
| BELL     | ceiling/double_wall/floor/single_wall |

Table A.4: Attachable materials

## A.1.4 Axis

Represents the axis along whilst this block is oriented.

<sup>&</sup>lt;sup>8</sup>The block is the same from age 0 to 4, and it changes in age 5. That's why age=5 is considered as age=1, and age=0-4 as age=0, as you may notice in Figure A.1, Modifier concatenation.

Except for NETHER\_PORTAL (which defaults to  $\mathbf{x}$ ), it defaults to  $\mathbf{y}$ .

| Material              | Age range |
|-----------------------|-----------|
| NETHER_PORTAL         | x/z       |
| ACACIA_LOG            | x/y/z     |
| ACACIA_WOOD           | x/y/z     |
| BASALT                | x/y/z     |
| BIRCH_LOG             | x/y/z     |
| BIRCH_WOOD            | x/y/z     |
| BONE_BLOCK            | x/y/z     |
| CHAIN                 | x/y/z     |
| CRIMSON_HYPHAE        | x/y/z     |
| CRIMSON_STEM          | x/y/z     |
| DARK_OAK_LOG          | x/y/z     |
| DARK_OAK_WOOD         | x/y/z     |
| DEEPSLATE             | x/y/z     |
| HAY_BLOCK             | x/y/z     |
| INFESTED_DEEPSLATE    | x/y/z     |
| JUNGLE_LOG            | x/y/z     |
| $\rm JUNGLE\_WOOD$    | x/y/z     |
| $MANGROVE\_LOG$       | x/y/z     |
| $MANGROVE\_WOOD$      | x/y/z     |
| MUDDY_MANGROVE_ROOTS  | x/y/z     |
| OAKLOG                | x/y/z     |
| $OAK_WOOD$            | x/y/z     |
| OCHRE_FROGLIGHT       | x/y/z     |
| PEARLESCENT_FROGLIGHT | x/y/z     |
| POLISHED_BASALT       | x/y/z     |
| PURPUR_PILLAR         | x/y/z     |
| QUARTZ_PILLAR         | x/y/z     |
| SPRUCE_LOG            | x/y/z     |
| SPRUCE_WOOD           | x/y/z     |

| Material                | Age range |
|-------------------------|-----------|
| STRIPPED_ACACIA_LOG     | x/y/z     |
| STRIPPED_ACACIA_WOOD    | x/y/z     |
| STRIPPED_BIRCH_LOG      | x/y/z     |
| STRIPPED_BIRCH_WOOD     | x/y/z     |
| STRIPPED_CRIMSON_HYPHAE | x/y/z     |
| STRIPPED_CRIMSON_STEM   | x/y/z     |
| STRIPPED_DARK_OAK_LOG   | x/y/z     |
| STRIPPED_DARK_OAK_WOOD  | x/y/z     |
| STRIPPED_JUNGLE_LOG     | x/y/z     |

| STRIPPED_MANGROVE_LOG   | x/y/z     |
| STRIPPED_MANGROVE_WOOD  | x/y/z     |
| STRIPPED_OAK_LOG        | x/y/z     |
| STRIPPED_OAK_WOOD       | x/y/z     |
| STRIPPED_SPRUCE_LOG     | x/y/z     |
| STRIPPED_SPRUCE_WOOD    | x/y/z     |
| STRIPPED_WARPED_HYPHAE  | x/y/z     |
| STRIPPED_WARPED_STEM    | x/y/z     |
| VERDANT_FROGLIGHT       | x/y/z     |
| WARPED_HYPHAE           | x/y/z     |
| WARPED_STEM             | x/y/z     |

Table A.5: Orientable materials

# A.1.5 Berries

Indicates whether the block has berries.

Defaults to false.

| Material         | Values     |
|------------------|------------|
| CAVE_VINES       | true/false |
| CAVE_VINES_PLANT | true/false |

Table A.6: Materials with berries

### A.1.6 Bites

Represents the amount of bites which have been taken from this slice of cake. Defaults to 0.

| Material | Values |
|----------|--------|
| CAKE     | 0-6    |

Table A.7: Cake

# A.1.7 Candles

Represents the number of candles which are present.

Defaults to 1.

| Material          | Values |
|-------------------|--------|
| BLACK_CANDLE      | 1-4    |
| BLUE_CANDLE       | 1-4    |
| BROWN_CANDLE      | 1-4    |
| CANDLE            | 1-4    |
| CYAN_CANDLE       | 1-4    |
| GRAY_CANDLE       | 1-4    |
| GREEN_CANDLE      | 1-4    |
| LIGHT_BLUE_CANDLE | 1-4    |
| LIGHT_GRAY_CANDLE | 1-4    |
| LIME_CANDLE       | 1-4    |
| MAGENTA_CANDLE    | 1-4    |
| ORANGE_CANDLE     | 1-4    |
| PINK_CANDLE       | 1-4    |

| Material      | Values |
|---------------|--------|
| PURPLE_CANDLE | 1-4    |
| RED_CANDLE    | 1-4    |
| WHITE_CANDLE  | 1-4    |
| YELLOW_CANDLE | 1-4    |

Table A.8: Materials with candles

# A.1.8 Charges

Represents the amount of times the anchor may still be used. Defaults to 0.

| Material       | Values |
|----------------|--------|
| RESPAWN_ANCHOR | 0-4    |

Table A.9: Charged materials

### A.1.9 Conditional

Denotes whether this command block is conditional or not. Defaults to false.

| Material                | Values     |
|-------------------------|------------|
| CHAIN_COMMAND_BLOCK     | true/false |
| COMMAND_BLOCK           | true/false |
| REPEATING_COMMAND_BLOCK | true/false |

Table A.10: Conditionable materials

## A.1.10 Delay

Propagation delay of a repeater.

Defaults to 1.

| Material | Values |
|----------|--------|
| REPEATER | 1-4    |

Table A.11: Delayable materials

### A.1.11 Down

Set which faces of the block textures are displayed on.

Except for BROWN\_MUSHROOM\_BLOCK, MUSHROOM\_STEM and RED\_MUSHROOM\_BLOCK (which defaults to true), it defaults to false.

| Material             | Values     |
|----------------------|------------|
| CHORUS_PLANT         | true/false |
| GLOW_LICHEN          | true/false |
| SCULK_VEIN           | true/false |
| BROWN_MUSHROOM_BLOCK | true/false |
| MUSHROOM_STEM        | true/false |
| RED_MUSHROOM_BLOCK   | true/false |

Table A.12: Materials with down option

## A.1.12 North, South, East and West

Set which faces of the block textures are displayed on.

As the *tall* option is unused (check Table A.1, Unused Spigot BlockData's modifiers), none and low will be considered as false and true, respectively.

| Material                 | Options (default on bold) |
|--------------------------|---------------------------|
| ACACIA_FENCE             | ${ m true}/{ m false}$    |
| BIRCH_FENCE              | ${ m true}/{ m false}$    |
| BLACK_STAINED_GLASS_PANE | ${ m true}/{ m false}$    |
| BLUE_STAINED_GLASS_PANE  | ${ m true}/{ m false}$    |
| BROWN_STAINED_GLASS_PANE | ${ m true}/{ m false}$    |
| CHORUS_PLANT             | ${ m true}/{ m false}$    |
| CRIMSON_FENCE            | ${ m true}/{ m false}$    |

| Material                      | Options (default on bold)      |
|-------------------------------|--------------------------------|
| CYAN_STAINED_GLASS_PANE       | true/false                     |
| DARK_OAK_FENCE                | ${ m true}/{ m {f false}}$     |
| FIRE                          | ${ m true}/{ m {f false}}$     |
| GLASS_PANE                    | ${ m true}/{ m {f false}}$     |

Table A.13: Orientable materials

# A.1.13 Up

Set which faces of the block textures are displayed on.

| Material             | Options    |
|----------------------|------------|
| CHORUS_PLANT         | true/false |
| FIRE                 | true/false |
| GLOW_LICHEN          | true/false |
| SCULK_VEIN           | true/false |
| VINE                 | true/false |

| MUSHROOM_STEM        | true/false |
| RED_MUSHROOM_BLOCK   | true/false |

Table A.14: Materials with up option

# A.1.14 Eggs

Number of eggs which appear in the block.

Defaults to 1.

| Material   | Values |
|------------|--------|
| TURTLE_EGG | 1-4    |

Table A.15: Materials with eggs

## A.1.15 Extended

Denotes whether the piston head is currently extended or not.

Defaults to false.

| Material      | Values     |
|---------------|------------|
| PISTON        | true/false |
| STICKY_PISTON | true/false |

Table A.16: Extendable materials

## A.1.16 Eye

Defaults to false.

| Material         | Values     |
|------------------|------------|
| END_PORTAL_FRAME | true/false |

Table A.17: Materials with eye

## A.1.17 Face

Represents the face to which a lever or button is stuck.

Defaults to wall.

| Material                   | Directions         |
|----------------------------|--------------------|
| ACACIA_BUTTON              | wall/floor/ceiling |
| BIRCH_BUTTON               | wall/floor/ceiling |
| CRIMSON_BUTTON             | wall/floor/ceiling |
| DARK_OAK_BUTTON            | wall/floor/ceiling |
| GRINDSTONE                 | wall/floor/ceiling |
| JUNGLE_BUTTON              | wall/floor/ceiling |
| LEVER                      | wall/floor/ceiling |
| MANGROVE_BUTTON            | wall/floor/ceiling |
| OAK_BUTTON                 | wall/floor/ceiling |
| POLISHED_BLACKSTONE_BUTTON | wall/floor/ceiling |
| SPRUCE_BUTTON              | wall/floor/ceiling |
| STONE_BUTTON               | wall/floor/ceiling |
| WARPED_BUTTON              | wall/floor/ceiling |

Table A.18: Directional materials

# A.1.18 Facing

Represents the face towards which the block is pointing.

| Material | Options (default on bold)     |
|----------|-------------------------------|
| HOPPER   | down/north/south/east/west    |
| OBSERVER | up/down/north/south/east/west |

| Material                | Options (default on bold)     |
|-------------------------|-------------------------------|
| BARREL                  | up/down/north/south/east/west |

Table A.21: Waterlogged materials

### A.2 Material modifiers concatenation

#### ... (how to join modifiers)

If a material doesn't have the attribute that the diagram is checking it will assume that the attribute value is the default one (0 or false, in most of the cases), resulting in ignoring that property.

<sup>&</sup>lt;sup>10</sup>If it's an underwater block (defaults to true).

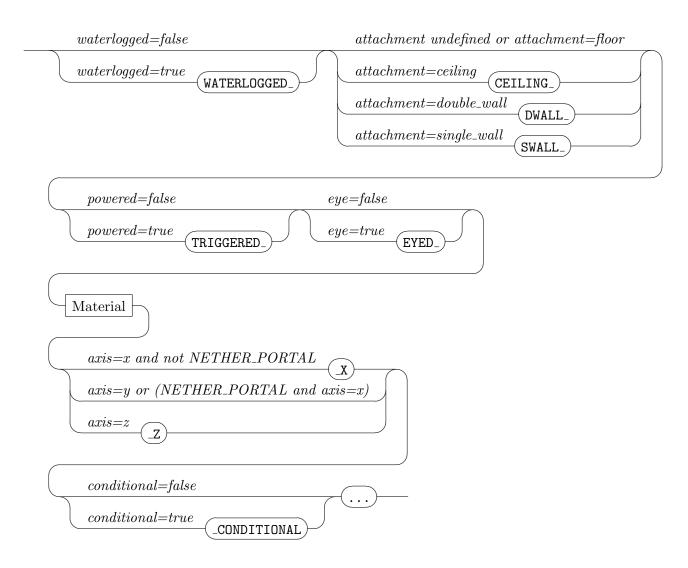

Figure A.1a: Modifier concatenation

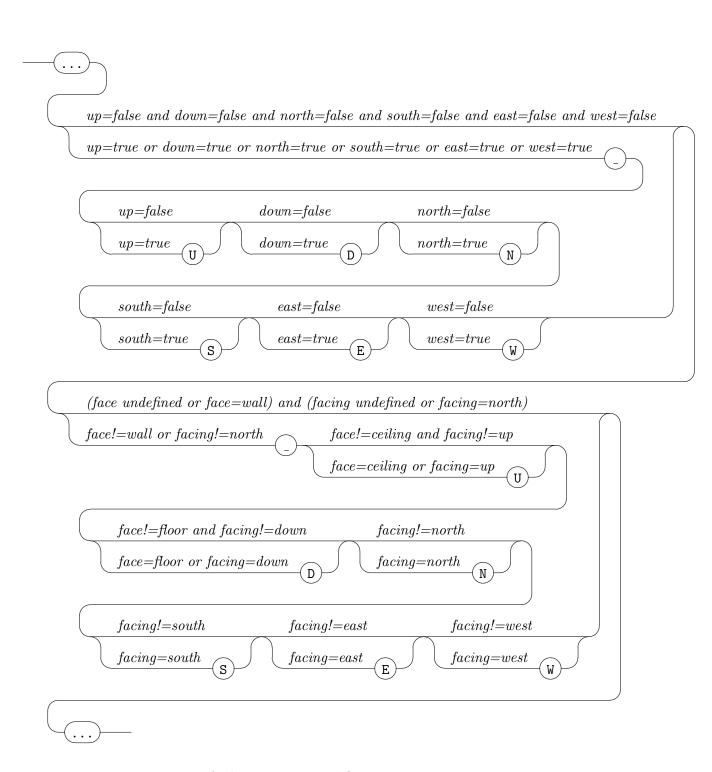

Figure A.1b: Direction modifier concatenation

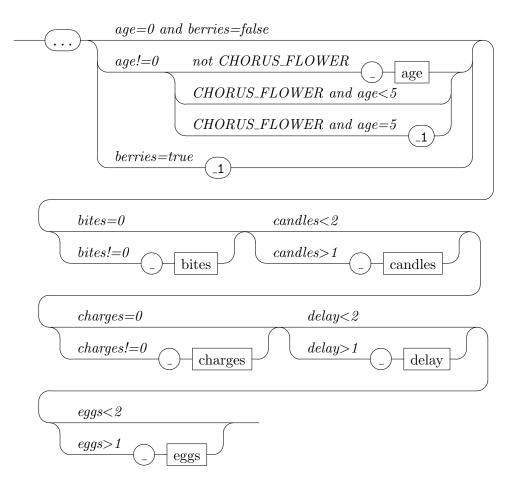

Figure A.1c: Integer modifier concatenation
